TENSOR TITANS

2050 : Letters from the future

TEAM MEMBERS :-

Ayesha Siddiqua Mukram

Raiha Syed Mohiddina

PRIMARY SDG :-

SDG 13 [climate action]

SECONDARY SDG'S :-

SDG 6

SDG 11

SDG 15

THE PROBLEM :-

Environmental problems such as river pollution, blocked drainage, improper waste disposal, deforestation, and unsustainable transportation threaten our planet and future generations.
Although young people are increasingly aware of climate change, they need more engaging ways to understand environmental issues and turn awareness into action.

OUR PROBLEM QUESTION :-

How can we use an interactive 2D game to encourage young people to take action against climate change and build a cleaner, greener, and more sustainable future?

Our Solution :-

An interactive game that turns awareness into action.

2050: Letters from the Future is a 2D environmental adventure in which players solve real-world-inspired environmental challenges through interactive missions.

Instead of only learning about pollution, players actively clean a river, unclog drains, plant trees, segregate waste, and explore sustainable transportation choices.

Our approach: Storytelling + Gameplay + Environmental Education.

AI contribution and AI tools used :-

- Gemini AI: Assisted with HTML code generation.
- Arena AI: Assisted with graphical refinements within the code.
- GitHub Copilot: Supported coding suggestions and implementation where applicable.

HUMAN CONTRIBUTION

- Original Concept: Developed the core idea of 2050: Letters from the Future and its environmental purpose.
- Storyline & Creativity: Created the narrative concept, Jennifer's role, and the connection between present-day choices and the future.
- Problem Identification: Identified the need to make environmental education more engaging for young people.
- Gameplay Planning: Decided the mission concepts, environmental challenges, game objectives, and overall user experience.
- Technical Execution: Ran the game, checked its functionality, tested its execution, and reviewed the outputs.
- Decision-Making & Refinement: Evaluated AI-assisted outputs and guided the project towards our intended vision.

Explaining the code :-

Our game uses HTML, CSS, and JavaScript to create an interactive environmental adventure.

- HTML: Structures the game pages, storyline, missions, buttons, and interactive elements.
- CSS: Controls the visual design, layouts, colours, animations, and overall gaming atmosphere.
- JavaScript: Handles gameplay logic, player choices, mission interactions, scoring, and game progression.

Game Execution: -

The code runs in a web browser, allowing players to interact with the game.

FUTURE SCOPE & EXPANSIONS

Our long-term goal is to develop this project beyond a hackathon prototype into a fully functional environmental gaming website. We would begin by improving the core gameplay, fixing bugs, and collecting feedback from students. Next, we would build additional levels, save-player-progress features, and a more immersive storyline. Once the game is reliable, we could launch a website, collaborate with schools and environmental organisations, and explore sustainable ways to fund further development.

Eventually, we would like to grow it into an educational gaming startup that combines entertainment, environmental awareness, and measurable real-world action. We understand that this would require further development, testing, user research, and responsible planning—but this prototype gives us a starting point.

OUR VISION :-

To transform environmental awareness into an experience people can play, learn from, and carry into the real world.

Thankyou

~ A heartfelt thank you to the entire CHIREC staff for organising this wonderful event! It has been an incredible learning experience for me, especially as a first-time hackathon participant. This journey has given me the opportunity to explore new ideas, challenge myself, learn new skills, and experience the excitement of innovation and teamwork. Thank you for creating such a valuable platform for young minds to learn, create, and grow. Truly a memorable experience! ~
